

## College algebra Volume 72, no. 36

Filesize: 3.24 MB

### ***Reviews***

*The publication is not difficult in go through better to comprehend. I could comprehended everything using this created e publication. Its been designed in an exceptionally easy way in fact it is merely soon after i finished reading through this ebook by which basically transformed me, modify the way i really believe.*

**COLLEGE ALGEBRA VOLUME 72, NO. 36****DOWNLOAD**

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . . . that of the first series, hence this remainder will also approach zero as a limit, and therefore either series will be convergent. 199. As explained in 120, when  $x$  is real, the symbol  $x$  denotes the numerical or absolute value of  $x$ ; thus,  $-21^2$  and  $121^2$ . 200. We shall now consider the convergence of the geometric series  $1 + x + x^2 + \dots$ . By division, or by the theory of the sum of a geometric series,  $1 - x^n = (1 - x)(1 + x + x^2 + \dots + x^{n-1})$ . There are three cases to consider according as  $a < l$ ,  $a = l$ , or  $a > l$ . First, when  $a < l$ . In this case  $x^n \rightarrow 0$  as  $n$  becomes indefinitely great. The denominator,  $1 - x$ , is constant. Therefore  $x^n \rightarrow 0$ . Hence the limit of the sum of  $n$  terms as  $n \rightarrow \infty$  becomes indefinitely great is  $\frac{1}{1-x}$ , which is a finite and determinate limit. Therefore by the definition of a convergent series, 195, the series is convergent. Second, when  $a = l$ . In this case  $x^n$  becomes infinite as  $n$  becomes indefinitely great; and therefore the sum of  $n$  terms does not approach a finite limit, and therefore the series is divergent, by 195. Third, when  $a > l$ . In this case each term is unity and the sum of  $n$  terms becomes infinite as  $n$  becomes infinite, and the series is therefore divergent. When  $x = -1$  the sum of  $n$  terms is alternately 1 and 0, and therefore the sum of  $n$  terms does not approach a determinate...
